

WHAT IS ETHICAL AI

Ethical AI in simple words is about ensuring your AI models are fair, ethical and unbiased.

How does bias get into the model?

A salary prediction model taking into account gender for salary hike or promotion.

A restaurant application driving the user to high-end restaurants only, based on his past spending, without the user being aware of it.

Do we need a RESET button for AI?

Build Ethical and Responsible AI Models

Designing the model without bias

- Validate the features and remove bias ✓
- Validate the data sources ✓

Explain the Model Output

- Designing applications with explainability in mind 
- Provide evidence and relevancy

Accountability and Auditability

- Track end to end lifecycle 
- Provide enough options to take informed decisions
